

Lilker Associates Welcomes Electrical Engineer Steven Eriquez

New York, June 16, 2015 Lilker Associates Consulting Engineers announces the addition of Steven Eriquez, PE, LEED AP, to its Project Management staff in the Manhattan office. Eriquez will be responsible for supervising key projects in the residential and commercial sectors, including condominium conversions and large scale retail and mixed-use facility systems design.

Eriquez has a 20-year track record of design and project management excellence. He has spent the past 15 years with AKF Group, where he provided project management and electric design team leadership on numerous high profile projects: the retail portion of the entire World Trade Center complex, the Woolworth Building Residential Condominium Complex, Cipriani Club and Condominium Residences at 55 Wall Street, the 600,000 sq. ft. Rego Park retail development, and the 226-bed Jamaica Hospital Nursing Home.

In addition to his engineering expertise, Eriquez is a talented motivator, communicator and facilitator. He is a certified Strength Deployment Inventory (SDI) Facilitator, having completed a program sponsored by the ACEC New York Leadership Institute and additional certification requirements. SDI focuses on understanding what factors motivate individuals in the workplace and employing that knowledge to create a more productive work environment.

“Steven Eriquez brings the whole package to Lilker. He is a skilled electrical engineer with a hands-on, personal approach to project management and a natural leader. We are so pleased to have him on the Lilker team,” says Lilker Principal and Electrical Engineering Department Head Michael Leonick.

“Lilker’s goals, management style and project experience are a great fit for me,” says Eriquez. “Along with an impressive portfolio of projects, there’s an ease of communication and fluidity that enhances productivity and encourages performance.”

The consummate New Yorker, Eriquez was born and raised in Brooklyn, and currently resides in Queens. Committed to serving his community, his college and his profession, Eriquez serves as a mentor to students at both of his alma maters, Xaverian High School and Manhattan College, where he earned a B.S. in Electrical Engineering and a minor in Mathematics. He coordinated his prior firm’s participation in Manhattan College’s Mentor Program for the past 10 years, and has just been nominated to the program’s Advisory Board. He also serves as Youth Choir Director for Our Lady of Grace Parish and Fund Raising Committee Treasurer at Ave Maria Catholic Academy, both in Howard Beach.
